Granufin[®]

Rockwood Pigments' unique production technology has resulted in real progress in colouring concrete products. Granufin[®] – free flowing micro granules basing on inorganic, alkali-stable, cement-compatible iron oxides complying with national and international standards. Granufin exhibits high UV and sunlight resistance as well as excellent weathering behaviour. In combination with the Granumat[®] metering unit – the optimal colouring system suitable for each concrete plant.

In close partnership with the customer economic solutions for pigment application are developed as well as tailor-made colouring systems. All Rockwood products are processed under highest quality control according to ISO 9002.

The Information presented in this colour card is given in good faith and is accurate to the best knowledge of Rockwood Pigments. Rockwood Pigments disclaims any liability in negligence or otherwise, incurred in connection with the use of our products. The colours illustrated are intended as a guide only.
